[Z] ZowoTec® 433 - Invisible Nature & Invisible Pure

Wood surfaces with a natural raw wood look are extremely popular. Builders and house owners specifically decide for the great natural product wood. They have the goal to permanently keep, see and feel this pure wood character indoors.

The new Invisible Nature and Invisible Pure technology from [Z] ZOBEL offers this to perfection. And regardless of whether the customer wants a lighter or stronger natural raw wood color, both are possible. So the customer and the builder can find the raw wood effect of their individual choice, with full flexibility for the producer who can apply the lacquer in both 1 and 2 layers - with excellent intermediate coating adhesion.

Even with thicker layers, the surface appears oiled or completely untreated. And not only that: also the haptics are simply perfect, the wood feels like being untreated. And all this with low emissions, green and water-based. Unique!

Follow-up costs and maintenance costs are also minimized compared to oiled surfaces, keeping highest quality standards. And much more. Experience now! Maximum of protection – maximum of natural appearance! Premium technology for wood surface finishing - made in Germany by [Z] ZOBEL! You have the choice:

The products

TopCoat Invisible Nature

The natural, invisible raw wood look

TopCoat Invisible Pure

The extra bright, invisible raw wood look

The highlights
